Allowable Subject Matter

Claim 1-15 and 17-25 allowed.

The following is an examiner's statement of reasons for allowance:

1. As for **claim 1**, the prior art does not teach or fairly suggest the use of an image management system comprising a digital camera and an image recording apparatus, wherein the digital camera comprises an imaging unit which images an object to output first image data, a first storage which stores the first image data output from the imaging unit, an instructing unit which issues an instruction to perform a predetermined process for the first image data stored in the first storage, a first processing unit which performs the predetermined process for the first image data stored in the first storage in response to the instruction issued by the instructing unit, and a transmitter which transmits a request to the image recording apparatus to perform the predetermined process for image data corresponding to the first image data in response to the instruction issued by the instructing unit, and wherein the image recording apparatus comprises a second storage which stores second image data corresponding to the first image data before a time when the instructing unit issues the instruction, and a second processing unit which performs the predetermined process for the second image data that is included in total image data stored in the second storage and that corresponds to the first image data, when the request transmitted from the transmitter is received.
2. As for **claim 4**, the prior art does not teach or fairly suggest the use of a digital camera comprising an imaging unit which images an object to output first image data, a

Art Unit: 2622

storage which stores the first image data output from the imaging unit, a communication controller which communicates with an image recording apparatus that stores second image data corresponding to the first image data, an instructing unit which issues an instruction to perform a predetermined process for the first image data stored in the storage, a processing unit which performs the predetermined process for the first image data stored in the storage in response to the instruction issued by the instructing unit, and a transmitter which transmits, to the image recording apparatus that is communicated with the communication controller, a request to perform the predetermined process for the second image data corresponding to the first image data.

3. As for **claim 22**, the prior art does not teach or fairly suggest the use of an image management method for an image management system comprising a digital camera and an image recording apparatus, the method comprising issuing an instruction to perform a predetermined process for first image data stored in the digital camera, performing the predetermined process for the first image data stored in the digital camera in response to the issued instruction, transmitting a request to the image recording apparatus to perform the predetermined process for image data corresponding to the first image data in response to the issued instruction, and performing the predetermined process for second image data which is included in image data stored in the image recording apparatus, and which corresponds to the first image data, when the transmitted request is received by the image recording apparatus, wherein the second image data corresponding to the first image data is stored in the

Art Unit: 2622

image recording apparatus before a time when the instruction to perform the predetermined process for the first image data is issued.

4. As for **claim 23**, the prior art does not teach or fairly suggest the use of an image processing method for a digital camera, the method comprising communicating with an image recording apparatus that stores second image data corresponding to first image data stored in the digital camera, issuing an instruction to perform a predetermined process for the first image data stored in the digital camera, performing the predetermined process for the first image data stored in the digital camera in response to the issued instruction, and transmitting, to the image recording apparatus with which the communication is performed, a request to perform the predetermined process for the second image data corresponding to the first image data.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
